jane.doe@example.com • +1 555 123 4567 • www.linkedin.com/in/janedoe/

EDUCATION

Example University

Bachelor of Science in Computer Science

City, Country

Expected Graduation: May 2027

TECHNICAL SKILLS

Programming Languages: Python, Java, TypeScript, JavaScript, C++, SQL

Framework & Libraries: React, Node.js, Express.js, FastAPI, GraphQL, PostgreSQL, Redis, Kafka, Docker

CI/CD, Cloud & Tools: Git, GitHub Actions, Kubernetes, Terraform, AWS, Linux

Spoken Languages: English, Spanish, Mandarin

EXPERIENCE

Example Technology Company

Remote

Software Engineer Intern

Jun.2025 - Aug.2025

- Built internal dashboard features with React and TypeScript, improving common workflow completion time by **25%** for operations users.
- Implemented REST API endpoints and database queries for reporting workflows, reducing manual data preparation from hours to minutes.
- Collaborated with product and design teammates to refine edge cases, validate requirements, and ship user-facing improvements.

Example Consulting Group

City, Country

Product Analyst Intern

Jan.2025 - Apr.2025

- Analyzed customer feedback and usage data to identify high-impact product gaps across onboarding and reporting flows.
- Created wireframes and acceptance criteria for new analytics features, helping engineering prioritize scoped releases.
- Presented weekly findings to stakeholders and maintained documentation for project risks, tradeoffs, and next steps.

PROJECTS

AI Document Review Assistant

Python, LangChain, RAG, PostgreSQL, Vector Search

- Built a retrieval-augmented assistant that summarizes uploaded documents and answers user questions with source-grounded responses.
- Designed chunking, embedding, and ranking logic that improved answer relevance by **30%** compared with a baseline prompt-only workflow.
- Added evaluation scripts for response quality, latency, and retrieval coverage to support repeatable iteration.

Real-Time Event Processing Platform

Golang, Kafka, Redis, PostgreSQL, Docker

- Implemented an event ingestion service that processes streaming records with retries, idempotency checks, and structured logging.
- Designed APIs for querying aggregated metrics, keeping p95 response time under **150ms** in local load tests.
- Containerized the system with Docker and documented local setup for contributors.

Full-Stack Task Management App

React, Node.js, Express.js, PostgreSQL, GitHub Actions

- Created a responsive task management interface with filtering, sorting, optimistic updates, and accessible form states.
- Built authentication, task APIs, and database migrations with automated checks in CI.
- Deployed a demo environment and wrote setup instructions for local development.
